

Fiber reinforced bulk everX Flow

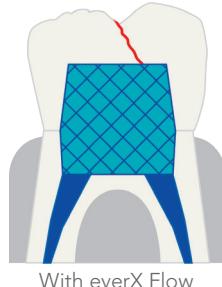

Strong to the core

NEW

Prevents cracking

Without everX Flow

With everX Flow

everX Flow™
from GC

Short-fibre reinforced
flowable composite
for dentine replacement.

To deep posterior cavities and core
build-up. Perfect thixotropy and great
adaptation. Easy to apply. Controlled flow.

“GC”

HENRY SCHEIN FIDES

everX Flow from GC

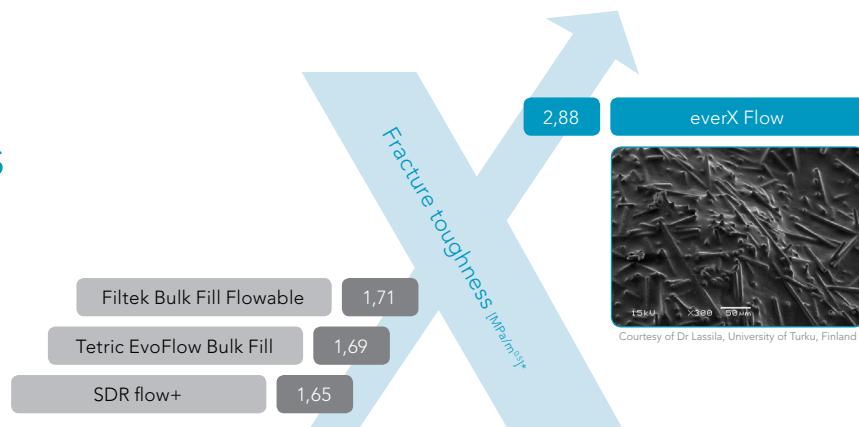

Strong to the core

Discover **everX Flow**, a short-fibre reinforced flowable composite designed to **replace dentine and reinforce restorations**. Following the same principle as the iron rebar in construction, the glass fibres in everX Flow strengthen restorations and **prevent them from cracking**.

With its easy application, its two shades and its incredible strength, everX Flow is about to become **your new go-to product for all your restorations in need of a strong core**, as well as **core build-up preparations**.

A superior
fracture toughness
for durable
large restorations

* Source: GCC R&D - Data on file.
Test performed following ASTM E399-90 (1997).

everX Flow offers **excellent fracture toughness close to that of dentine** thanks to a **high amount of short fibres** strongly bonded to the resin matrix. This enables the material to **efficiently reinforce large posterior restorations**, in combination with a conventional composite as enamel layer.

Perfect thixotropy for an **easy placement**
and a **great adaptation**

Thanks to its optimal thixotropy, everX Flow will easily **adapt to every preparation** and help to **avoid porosities**. Its controlled flow also enables you to place it in upper molars **without slumping**.

Two shades to answer **all your needs**

Optimal for **deep posterior cavities**

Optimal for **more aesthetic results**
and for **core build-up**
